Vincent Chua

Skills

DevOps Tools	Ansible, Docker, Kubernetes, Linux, Grafana, Git
Programming	Python, SQL, Bash, Golang

Work Experience

CoreWeave — Sunnyvale, California
Senior Security Production Engineer — Oct 2025 - Present

- Build observability stack for Security log aggregation platform using **Grafana**, **Prometheus**, and **Loki**
- Develop scripts to build out a local test environment for a Elastic Kubernetes application
- Bringup oncall rotation, alerting, and monitoring dashboards for company wide access management and VPN services
- Develop repo of agent skill files using Claude and Codex to automate common developer workflows such as Jira ticket creation and common investigation workflows for alert triage

TikTok US Data Security (USDS) — San Jose, California
Site Reliability Engineer, Product — Oct 2022 - Sep 2025

- Build **Grafana** and **Tableau** dashboards for data visualization to monitor health and data trends of TikTok's privacy microservices
- Develop **Python** scripts to process data for log retrieval and service scaling
- Develop and maintain ETL (Extract, Transform, Load) data pipelines using **SQL**, Apache Hive tables, and SQL databases for privacy services
- Troubleshoot build failures, container deployment issues with developers using **Linux** webshell and log aggregation tools
- Lead scrum activities for team using Jira and document information through standard operating procedures and runbooks

IBM — Toronto, Canada
DevOps Developer, IBM Cloud — Jun 2021 - Sep 2022

- Develop **Ansible** scripts for **Kubernetes** Infrastructure as Code (IaC) provisioning
- Migrate Ansible job templates and workflow templates across Ansible Tower servers
- Architect security hardening automation for **Linux** security remediation and follow security compliance spec
- Develop **Python** scripts with Selenium to automate manual frontend testing and web application setup

Teledyne Flir — Vancouver, Canada
DevOps Engineer Intern — May 2019 - Dec 2019

- Maintain Jenkins servers and hundreds of build pipelines for software and firmware artifacts
- Improve CI/CD pipeline build stability by deploying **Docker** build environment image containers as build agents
- Maintain Linux build servers and debug build scripts in Perl, Bash, and Python

BC Cancer Research Center — Vancouver, Canada
Sysadmin Intern — Jan 2018 - Aug 2018

- Provide sysadmin support for scientists, manage Slurm nodes for bioinformatics pipelines
- Provision and setup Windows, Mac, and Linux machines for new users
- Resolve Linux user issues including file permissions, network issues, disk space issues, and software installations

Education

Bachelor of Applied Science in Computer Engineering
University of British Columbia

- Relevant coursework: Cybersecurity, Operating Systems, Data Structures and Algorithms
